

Survey of Nurses 2009

EXECUTIVE SUMMARY

In 2009, the Michigan Center for Nursing conducted the sixth annual survey of nurses licensed in Michigan to collect data on their employment status, geographic distribution, age, plans to continue practicing, work setting, practice area, education, gender, and racial/ethnic background. The survey also includes questions related to nurses' decisions to leave a position in nursing and the factors that led to these decisions.

Responses from a mailed survey and Web-based survey were combined and analyzed. In 2009, the total sample consisted of

- 36,125 registered nurse (RN) surveys, yielding a margin of error of ± 0.4 percent with 95 percent confidence; and
- 7,497 licensed practical nurse (LPN) surveys, yielding a margin of error of ± 1.0 percent with 95 percent confidence.

All nurses are required to renew their license every two years after receiving their first license, which results in two approximately equal cohorts of nurses. Analysis of the six years of survey data shows a difference between these two cohorts of nurses in age distribution. The cohort of nurses who renewed their licenses during 2005, 2007 and again in 2009 is older than the cohort of nurses who renewed their licenses in 2004, 2006, and 2008. Therefore, survey responses that may be affected by age—such as plans to continue practicing nursing—should be compared only to responses received from the same license renewal cohort two years ago. If differences between survey findings from one year to another are statistically significant (i.e., outside of the margin of error), they are noted in the text.

Key findings from the 2009 survey show that:

- Approximately 83 percent of licensed RNs and 77 percent of licensed LPNs report that they are *active* in nursing—working in nursing or a related area full- or part-time. While this percentage has changed very little for RNs since the survey of nurses was implemented in 2004, the percentage of LPNs who report they are active in nursing dropped in 2009.
- An estimated 95,644 licensed registered nurses are working in nursing or a related area *in Michigan*—about 79,480 (83 percent) of these RNs provide direct patient care services in their main nursing position.

- An estimated 20,355 licensed practical nurses are working in nursing or a related area *in Michigan*—about 18,442 (about 91 percent) of these LPNs provide direct patient care services.
- About 3 percent of licensed nurses are unemployed and seeking employment in nursing.
- Of the RNs working full- or part-time in nursing, about 72 percent are employed 35 or more hours per week.
- The proportion of active LPNs employed 35 or more hours per week is about 67 percent.
- The ratio of active *registered nurses* to population in Michigan is approximately 956 RNs for every 100,000 people; the ratio of active *licensed practical nurses* to population is approximately 203 LPNs per 100,000 people.
- About 33 percent of *active* registered nurses in this license renewal cohort reported that they are aged 55 or older, compared to 27 percent of active registered nurses *in the same license renewal cohort* who responded to the survey in 2007. About 41 percent of *active* licensed practical nurses in this license renewal cohort are aged 55 or older, compared to 35 percent in 2007.
- About 40 percent of *active* RNs and 43 percent of *active* LPNs say they plan to practice nursing for only one to ten more years. This group is larger than it was in 2007 when 38 percent of all active RNs and 41 percent of all active LPNs *in the same license renewal cohort* said they planned to practice nursing for only one to ten more years.
- In 2009, about 20 percent of RNs and 20 percent of LPNs surveyed said they had voluntarily left a nursing position in the last two years. Of these, more than half—56 percent of RNs and 60 percent of LPNs—said they left to take another nursing position with a different organization.
- Nearly three-fourths of *active* registered nurses (about 73 percent) are employed in either the hospital inpatient or outpatient setting; LPNs (about 44 percent) are most likely to be employed in nursing homes or long-term care facilities.
- About 6 percent of *active* RNs and 5 percent of active LPNs are male.¹
- About 6 percent of *active* RNs are African American, 4 percent are Asian, and 1 percent are American Indian/Alaskan Native.
- About 12 percent of *active* LPNs are African American, 2 percent are Asian, and 2 percent are American Indian/Alaskan Native.
- About 1 percent of *active* RNs and 2 percent of active LPNs are Spanish/Hispanic/Latino.

¹ The U.S. Census Bureau annual population estimates by sex, race, and Hispanic or Latino origin show the following percentages for Michigan for 2008: 49.2 percent male, 50.8 percent female, 81.2 percent white, 14.2 percent black or African American, 2.4 percent Asian, 0.6 percent American Indian or Alaskan Native, 0.4 percent Native Hawaiian or other Pacific Islander, and an estimated 4.1 percent Hispanic or Latino. The sum of percentages for race equals less than 100 because individuals reporting more than one race are not counted in these percentages.

INTRODUCTION

One of the goals of the Michigan Center for Nursing is to establish a central resource for nursing workforce data collection and analysis. The Michigan Center for Nursing conducts an annual survey of nurses licensed in Michigan to collect data on their employment status, geographic distribution, age, plans to continue practicing, work setting, practice area, education, gender, and racial/ethnic background. The survey instrument also includes a question on whether the nurse has left a position in nursing during the past two years, and, if so, what factors led to the decision to leave the previous nursing position. This report presents the survey findings for 2009 and a description of the survey methodology.

The samples for this survey and previous surveys were drawn from the Michigan licensure files maintained by the Michigan Department of Community Health. All nurses are required to renew their license every two years after receiving their first license, which results in two approximately equal cohorts of nurses. The survey was mailed to nurses renewing their license in 2009, along with their license renewal form, and the survey was also available online for nurses renewing their license via the Internet.

Analysis of survey data shows a difference between the two cohorts of nurses in age distribution. The cohort of nurses who renewed their licenses during 2005, 2007 and again in 2009 is slightly older than the cohort of nurses who renewed their licenses in 2004, 2006, and 2008. Therefore, survey responses that may be affected by age—such as plans to continue practicing nursing—should be compared only to responses received from the *same* license renewal cohort in a previous survey.

In 2009, the survey sample consisted of 36,125 registered nurse (RN) surveys, yielding a margin of error of ± 0.4 percent with 95 percent confidence; and 7,497 licensed practical nurse (LPN) surveys, yielding a margin of error of ± 1.0 percent with 95 percent confidence.² The large number of responses received and the sampling design assure that the survey findings are applicable to the entire population of nurses licensed in Michigan for characteristics that are not likely to be affected by a nurse's age. If differences between survey findings from one year to another are statistically significant (i.e., outside of the margin of error), they are noted in the text.

NUMBER OF NURSES

The total number of nurses licensed by the State of Michigan is 156,161 (as of January 1, 2009). Of these, 128,311 are registered nurses (RNs) and 27,850 are licensed practical nurses (LPNs). The total number of nurses licensed by Michigan (including both active and inactive RNs and LPNs) has increased by 3,235 since 2008.³ The number of licensed

² For example, if the answer to a survey question is 60 percent “Yes,” the margin of error and confidence level mean that if this question were asked 100 times, in 95 occurrences the answer of the entire universe of respondents would be between 59 percent and 61 percent (i.e., the ± 1 percent margin of error). In the other 5 occurrences, the true answer from the universe would be either below or above this range (confidence interval).

³ Data for 2004, 2005, 2006, 2007, 2008, and 2009 are from the annual *Michigan Center for Nursing Survey of Nurses*. All data from earlier licensure surveys of nurses cited in this report are from the *Study of the*

RNs increased by 2,909 (2.3 percent), while the number of licenses for LPNs increased by 326 (1.2 percent) during the same period.

In 2009, approximately 83 percent of licensed RNs report that they are active in nursing—working in nursing or a related area full- or part-time.⁴ About 77 percent of LPNs are working in nursing or a related area (see Exhibit 1). The percentage of licensed RNs and LPNs who are active in nursing is relatively unchanged from the proportions reported since 2004.

EXHIBIT 1
Employment Status of RNs and LPNs in Michigan, 2009

	Registered Nurses		Licensed Practical Nurses	
	%	Number*	%	Number*
Total number of nurses licensed by Michigan		128,311		27,850
Total active nurses—employed in nursing or related area	83.1%	106,626	77.1%	21,472
Not employed, and seeking employment in nursing or related area	2.2%	2,823	4.2%	1,170
Employed, but not in nursing	2.6%	3,336	4.6%	1,281
Not employed, and seeking employment outside nursing	0.2%	257	0.5%	139
Temporarily not working and not looking for a job	5.1%	6,544	6.5%	1,810
Retired or no plans to return to work	6.8%	8,725	7.0%	195
Active nurses employed in Michigan (89.7 percent of active RNs, 94.8 percent of active LPNs)		95,644		20,355
Active nurses providing direct care services in Michigan (83.1 percent of active RNs employed in MI, 90.6 percent of active LPNs employed in MI)		79,480		18,442

*NOTE: The number of nurses licensed by Michigan is from the Michigan licensure files maintained by the Michigan Department of Community Health as of January 1, 2009. All other numbers are estimated based on data from the Michigan Center for Nursing Survey of Nurses 2009.

However, some nurses who are active in nursing are not working in Michigan, even though they hold a Michigan license. And some nurses working in positions in related

Current and Future Needs of the Professional Nursing Workforce in Michigan, prepared for the Michigan Department of Consumer and Industry Services by Public Sector Consultants Inc., July 2001.

⁴ Throughout this report, the term “active” is used to refer to nurses who are working in nursing or a related area on a full-time or part-time basis. “Active” does not include nearly 3 percent of licensed nurses who are unemployed and seeking nursing work and could be considered part of the available nursing workforce.

areas, such as nursing education or administration, do not provide direct care services to patients. The following estimates are based on survey findings for 2009.

- An estimated 95,644 RNs (about 90 percent) are working in nursing or a related area *in Michigan*.
- An estimated 79,480 RNs working in Michigan (about 83 percent of active registered nurses) *provide direct patient care services* in their main nursing position.
- An estimated 20,355 LPNs (about 95 percent) are working in nursing or a related area *in Michigan*.
- An estimated 18,442 LPNs working in Michigan (about 91 percent of active licensed practical nurses) provide direct patient care services in their main nursing position.

Analysis of data in this report focuses on active nurses—those nurses who are working in nursing or a related area full- or part-time. Analysis of the data only for these *active* nurses shows that:

- About 72 percent of *active* RNs are employed 35 or more hours per week. This percentage has not changed since 2004.
- About 67 percent of *active* LPNs are employed 35 or more hours per week, which is relatively unchanged since 2004.

RATIO OF NURSES TO POPULATION

Based on the employment location reported by nurses, the estimated ratio of active nurses to population in Michigan is 1,143 per 100,000.⁵ This nurse-to-population ratio estimate includes *both* LPNs and RNs who are employed in nursing full-time or part-time in Michigan. The estimated ratio of active *registered nurses* to population in Michigan is 956 for every 100,000 people. The ratio of active *licensed practical nurses* to population is 203 LPNs per 100,000 people.

AGE OF NURSES

The proportion of active licensed nurses nearing retirement is increasing for both RNs and LPNs in Michigan, as shown by the following survey results.

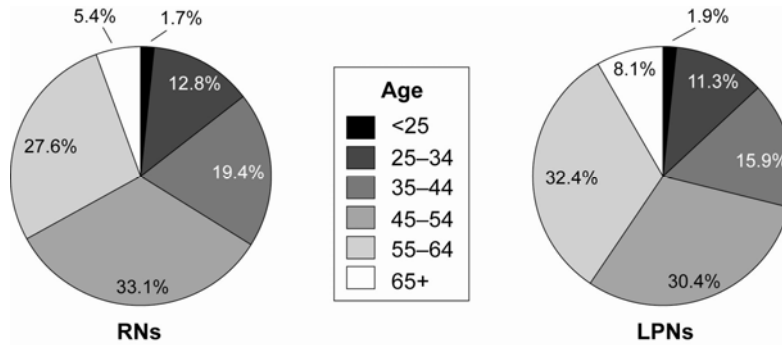

- About 33 percent of *active* registered nurses in this license renewal cohort reported that they are aged 55 or older (see Exhibit 2), compared to 27 percent of active registered nurses in the same license renewal cohort who responded to the survey in 2007. In the survey responses for 2009, the average age of active RNs licensed in Michigan is 48 years.
- About 41 percent of *active* licensed practical nurses in this license renewal cohort are aged 55 or older, compared to 35 percent in the same license renewal cohort who

⁵ Nurse-to-population ratios for 2009 are calculated using the employment location reported by nurses and the U.S. Census Bureau annual population estimates for Michigan for 2008. Prior to 2004, licensure surveys used the mailing address of licensed nurses to estimate the number of nurses active in Michigan and nurse-to-population ratios. Using this methodology, the nurse-to-population ratio for 1998–99 was 1,079 nurses per 100,000 people.

responded to the survey in 2007. In the survey responses for 2009, the average age of active LPNs licensed in Michigan is 50 years.

The population of nurses in Michigan is continuing to age. In the 1998–99 licensure renewal survey, only 14 percent of RNs and 19 percent of LPNs were aged 55 or older.

EXHIBIT 2
Proportion of Active RNs and LPNs, by Age

SOURCE: Michigan Center for Nursing Survey of Nurses 2009.

NOTE: Percentages presented here are based on bivariate analysis of age and employment status for all licensed nurses.

LENGTH OF TIME REMAINING IN NURSING

It is not just the nurses nearing retirement age who are planning to stop practicing nursing in the near future. As shown in Exhibit 3, about 40 percent of *all* active RNs and 43 percent of *all* active LPNs say they plan to practice nursing for only one to ten more years. This group is slightly larger than it was in 2007, when 38 percent of all active RNs and 41 percent of all active LPNs *in the same license renewal cohort* said they planned to practice nursing for only one to ten more years.

EXHIBIT 3
Plans to Practice Nursing for Active LPNs and RNs

SOURCE: Michigan Center for Nursing Survey of Nurses 2009.

VOLUNTARY CHANGE IN NURSING POSITION

About one in five RNs and LPNs surveyed said they had voluntarily left a nursing position in the last two years.

- More than half (56 percent) of the RNs who reported voluntarily leaving a nursing position said it was to take another nursing position with a different organization and about 18 percent said it was to take another nursing position in the same organization.
- A similar proportion (60 percent) of the LPNs who reported voluntarily leaving a nursing position said it was to take another nursing position with a different organization and about 6 percent said it was to take another nursing position in the same organization.
- About 20 percent of RNs and 26 percent of LPNs who had left a nursing position said it was to retire or quit nursing, compared to 18 percent of RNs and 20 percent of LPNs in 2007.
- About 5 percent of the RNs and about 8 percent of the LPNs who had left a nursing position said it was to take a position outside nursing.

For those nurses who left a nursing position, the factors leading to their decision that were mentioned most often, in descending order, were “general lack of job satisfaction”; “personal or family concerns”; “physical demands of the job”; “inadequate salary/wages”; and “age” (see Exhibit 4).

EXHIBIT 4

Factors Influencing Decisions to Leave a Nursing Position, 2009

Factors	RNs	LPNs
General lack of job satisfaction	38.5%	36.6%
Personal or family concerns	26.6	26.9
Physical demands of the job	18.9	21.7
Inadequate salary/wages	16.6	19.3
Age	15.0	16.7
Career promotion	12.9	8.4
Employer/employee conflict	11.1	13.3
Increasing administrative burden	10.4	10.5
Inadequate benefits	8.7	13.3
Childbearing/childrearing	5.9	3.8
Opportunity to work in nursing administration	3.7	2.0
Opportunity to work in nursing education	3.7	1.1

SOURCE: *Michigan Center for Nursing Survey of Nurses 2009.*

NOTE: Nurses were asked to indicate all factors that led to their decision to leave a nursing position in the last two years, so the sum of the percentages will be more than 100 percent.

WORK SETTING

Nearly three-fourths of active registered nurses (about 73 percent) are employed in either the hospital inpatient or outpatient setting (see Exhibit 5). The percentage of LPNs employed in the hospital setting has dropped since 1992–93, from 44 percent to about 21

percent in 2009. Almost half of all active LPNs (about 44 percent) are employed in nursing homes or long-term care facilities.

EXHIBIT 5
Employment Settings of Active RNs and LPNs, 2009

Employment Settings	RNs	LPNs
Hospital inpatient	56.5%	15.5%
Hospital outpatient	16.4	5.7
Home health care	7.0	12.4
Nursing home/long-term care facility	6.8	44.1
Physician's office	6.5	18.7
Nursing education	4.8	1.2
Non-hospital outpatient	4.1	2.7
Public/community health	3.8	2.1
Hospice	2.9	2.4
Insurance company/health plan	2.2	0.7
Traveling/temporary nurse	1.3	1.1
School health	1.1	1.3
Other	8.1	7.5

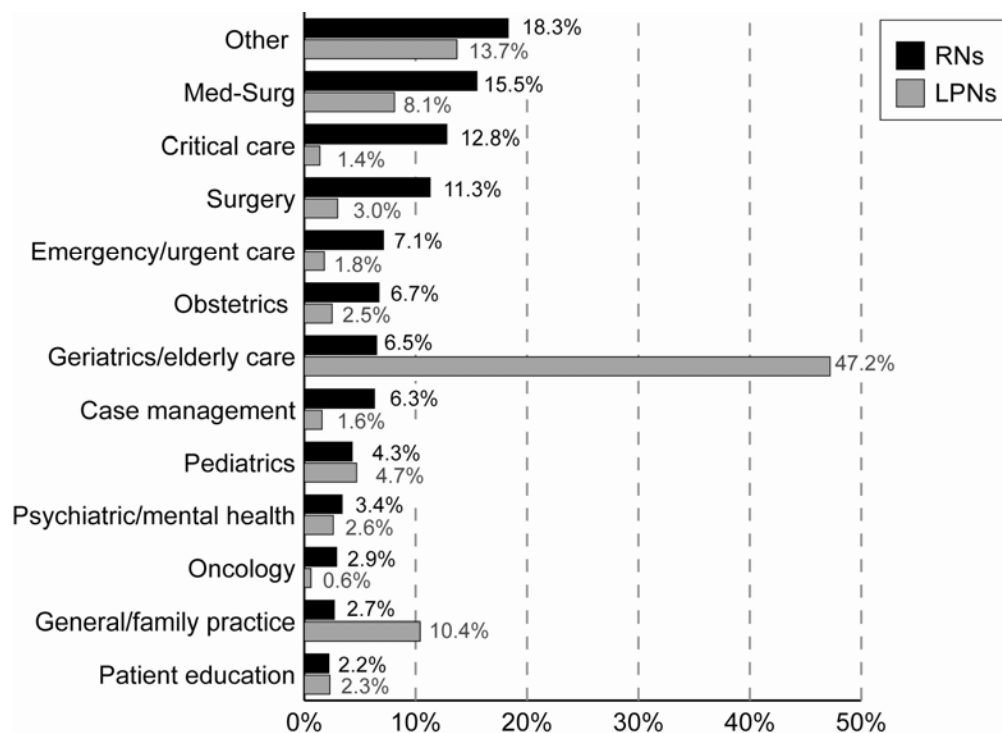

SOURCE: *Michigan Center for Nursing Survey of Nurses 2009.*

NOTE: Nurses were asked to indicate all of their current employment settings, so the sum of the percentages will be more than 100 percent.

PRACTICE AREA

Approximately 83 percent of active RNs and 91 percent of active LPNs report that their main nursing position involves providing direct care services to patients/families. These nurses were asked to identify their main practice area from a list of areas given (see Exhibit 6). The practice area that RNs identified most often among the choices offered was “med-surg” (16 percent). Almost half (about 47 percent) of active LPNs who provide direct care identified their main practice area as “geriatrics/elderly care.”

EXHIBIT 6
Main Practice Area of Active RNs and LPNs Who
Provide Direct Patient Care, 2009

SOURCE: Michigan Center for Nursing Survey of Nurses 2009.

EDUCATION

All nurses responding to the MCN Survey of Nurses were asked to indicate their level of education (all degrees completed).

- Approximately 5 percent of active RNs also hold an LPN diploma or an LPN certificate of nursing.
- About 44 percent of active RNs have an associate's degree in nursing; 39 percent hold a bachelor's degree in nursing; and 20 percent have an RN diploma in nursing. (Nurses may hold more than one nursing degree, so percentages total more than 100.)
- About 7 percent of active RNs hold a master's degree in nursing and about 5 percent hold a master's degree in another field.
- Less than 1 percent (0.4 percent) of registered nurses hold a doctorate in nursing. Among those with a doctorate, nearly three-fourths (73) percent have a Doctor of Philosophy (PhD); 19 percent have a Doctor of Nursing Practice (NPD); 4 percent have a Doctor of Nursing Science (DNSc); and about 3 percent have a Doctor of Nursing (ND).
- Approximately 96 percent of active LPNs have an LPN diploma or an LPN certificate of nursing.
- About 8 percent of RNs and 7 percent of LPNs report they hold some other degree.

In the 2009 survey, questions were added to ask nurses about specialty certification and whether they are currently enrolled in bachelor's or master's degree programs.

- About 3 percent of RNs are applying for or renewing Nurse Practitioner certification; about 2 percent of RNs are applying for or renewing Nurse Anesthetist certification; about 1 percent of RNs are applying for or renewing Clinical Nurse certification; and less than 1 percent of RNs are applying for or renewing Nurse Midwife certification in 2009.
- About 4 percent of RNs and 3 percent of LPNs are enrolled in a program to obtain a Bachelor of Science in Nursing (BSN) degree.
- About 3 percent of RNs are enrolled in a program to obtain a Master of Science in Nursing degree.

RACIAL/ETHNIC BACKGROUND AND GENDER

Data on racial/ethnic and gender characteristics of the nursing population in Michigan show that:

- 6 percent of active RNs and 5 percent of active LPNs are male.
- 87 percent of active RNs are white, 6 percent are African American, 4 percent are Asian, 1 percent are American Indian/Alaskan Native, and less than 1 percent are Middle Easterner or Pacific Islander.
- 83 percent of active LPNs are white, 12 percent are African American, 2 percent are American Indian/Alaskan Native, 2 percent are Asian, and less than 1 percent are Middle Easterner or Pacific Islander.
- About 1 percent of active RNs and 2 percent of active LPNs are Spanish/Hispanic/Latino.

METHODOLOGY

The Michigan Center for Nursing contracted with Public Sector Consultants Inc. (PSC) for development, implementation, and analysis of the survey of nurses. A single instrument for both RNs and LPNs was designed in collaboration with the Michigan Center for Nursing Advisory Board. The instrument contains questions about education background, current enrollment in a nursing education program, employment setting, practice area, and the length of time that the respondent intends to stay in the nursing profession, as well as a number of demographic questions (age, gender, race/ethnicity). The survey instrument also includes questions on whether the nurse had left a position in nursing during the past two years, and, if so, what factors led to the decision to leave the previous nursing position. (The survey instrument and response frequencies for RNs and LPNs are attached to this report, and include data from previous surveys as a reference.)

The samples for these surveys were drawn from the Michigan licensure files maintained by the Michigan Department of Community Health. All nurses are required to renew their license every two years. The universe of nurses is divided into two cohorts of roughly equal size depending on the year in which each nurse was first licensed. The surveys were mailed to nurses renewing their license in 2009 along with their license renewal forms. A total of 76,094 nurses (63,042 RNs and 13,052 LPNs) renewed their license.

Nurses could either return the paper version of the survey with their renewal or complete both the survey and their license renewal online. The large number of paper and Web-based surveys collected permits a robust analysis. Combining the responses from the paper version with the results from the Web survey resulted in a total of

- 36,125 completed RN surveys, yielding a margin of error of ± 0.4 percent with 95 percent confidence; and
- 7,497 completed LPN surveys, yielding a margin of error of ± 1.0 percent with 95 percent confidence.

These totals include fully and partially completed surveys (that is, those with information missing for one or more variables); thus the sample size for individual variables will differ and the margin of error may change slightly depending upon the amount of data for that particular variable.

Survey Instrument and RN Response Frequencies¹ 2004–2009²

For 2009 survey results, N=36,125

This information is being collected by the Michigan Center for Nursing to describe the supply of and demand for nurses in Michigan. Data from this survey will be used to inform state and local decision making regarding the recruitment, education, and employment of nurses in Michigan. The information you provide will be confidential; the identity of individual respondents will not be shared with anyone. Completion of the questions below is voluntary and does not affect your license. However, this information is important and your participation is encouraged and truly appreciated. *Please complete the survey and return it with your renewal application in the envelope provided.* If you are both an LPN and an RN, complete and return only one survey.

If you renew your license via the Internet, you will have the opportunity to complete this survey online.

Go to www.michigancenterfornursing.org to view survey results and to sign up to receive Michigan Center for Nursing News & Updates electronically.

1. Are you a licensed practical nurse (LPN), a registered nurse (RN), or both? (Mark **one**. If you are both an LPN and an RN, complete and return only one survey.)

	RNs 2005	RNs 2006	RNs 2007	RNs 2008	RNs 2009
RN only	96.4%	95.8%	96.6%	96.4%	96.9%
Both LPN and RN	3.6	4.2	3.4	3.6	3.1

NOTE: This question was not asked on the 2004 survey.

2. What is your education background? (Mark **all** that apply)

	2004	Active only				
		2005	2006	2007	2008	2009
a) LPN diploma/certificate of nursing	—	3.7%	5.5%	5.8%	5.6%	4.6%
LPN certificate of achievement	—	1.9	—	—	—	—
b) RN diploma in nursing	—	22.3	18.7	21.9	22.0	20.1
c) Associate's degree in nursing	42.1%	44.4	48.4	45.8	45.5	44.4
d) Bachelor's degree in nursing	40.3	37.4	37.0	38.0	38.6	39.1

¹ Frequencies reported may not equal 100 percent due to rounding.

² All nurses are required to renew their license every two years after receiving their first license, which results in two approximately equal cohorts of nurses. Analysis of survey data shows a difference between these two cohorts of nurses in age distribution. Therefore, survey responses that may be affected by age—such as plans to continue practicing nursing—should be compared only to responses received from the same license renewal cohort two years ago (e.g., 2009 compared to 2007, 2008 compared to 2006).

	Active only					
	2004	2005	2006	2007	2008	2009
e) Master's degree in nursing	8.4	7.4	6.4	6.8	7.0	7.3
f) Master's degree in other field	—	—	3.9	4.4	4.7	4.7
g) Doctorate in nursing	0.4	0.3	0.3	0.3	0.4	0.4
h) Doctorate in other field	—	—	—	—	0.4	0.4
i) Other degree	9.4	10.6	8.0	8.8	8.9	7.6

NOTE: In 2004, 21.8% of all RNs reported they held a diploma in nursing. On the 2005 survey, "diploma in nursing" was replaced as a response option by "LPN diploma in nursing," "LPN certificate of achievement," and "RN diploma in nursing." On the 2006 and 2007 survey, "LPN diploma in nursing" and "LPN certificate of achievement" were combined as one response option.

3. If you have a doctorate in nursing, please indicate the type of doctorate degree. (Mark all that apply.)

	2009 (Active only)
a) Doctor of Nursing (ND)	3.2%
b) Doctor of Nursing Practice (NPD)	19.0
c) Doctor of Nursing Science (DNSc)	4.0
d) Doctor of Philosophy (PhD)	73.0

4. Are you applying for or renewing specialty certification this year? If so, mark all that apply.

	2009 (Active only)
a) Clinical nurse specialist	0.9%
b) Nurse anesthetist	1.7
c) Nurse midwife	0.3
d) Nurse practitioner	2.7

5. Are you currently enrolled in a program to obtain a Bachelor of Science in Nursing (BSN) degree?

	2009 (Active only)
a) Yes	4.1%
b) No	95.9

6. Are you currently enrolled in a program to obtain a Master of Science in Nursing (MSN) degree?

	2009 (Active only)
a) Yes	2.7%
b) No	97.3

7. Did you graduate from a nursing school in the United States or in another nation?

	Active only					
	2004	2005	2006	2007	2008	2009
a) United States	93.7%	92.8%	95.1%	93.4%	93.6%	93.7%
b) Other nation	6.3	7.2	4.9	6.6	6.4	6.3

8. What is your current employment status? (Mark **one**)

	2004	2005	2006	2007	2008	2009
a) 35 or more hours per week in nursing or related area	62.3%	60.2%	61.6%	60.6%	60.8%	59.7%
b) Less than 35 hours per week in nursing or related area	24.5	24.9	23.0	24.2	23.4	23.4
c) Employed, but not in nursing	3.1	2.9	3.3	2.7	2.7	2.6
d) Not employed, and seeking employment in nursing or related area	1.8	1.7	1.8	1.6	1.7	2.2
e) Not employed, and seeking employment outside of nursing	0.4	0.2	0.2	0.2	0.2	0.2
f) Temporarily not working and not looking for a job	4.3	4.9	5.1	4.8	4.6	5.1
g) Retired or with no plans to return to work	3.7	5.1	4.9	6.0	6.6	6.8

9. Identify your current employment setting(s). (Mark **all** that apply)

	Active only					
	2004	2005	2006	2007	2008	2009
a) None (not active in nursing)	4.7%	0.2%	0.2%	0.2%	0.2%	0.2%

Survey Instrument and LPN Response Frequencies³ 2004–2009⁴

For 2009 survey results, N=7,497

This information is being collected by the Michigan Center for Nursing to describe the supply of and demand for nurses in Michigan. Data from this survey will be used to inform state and local decision making regarding the recruitment, education, and employment of nurses in Michigan. The information you provide will be confidential; the identity of individual respondents will not be shared with anyone. Completion of the questions below is voluntary and does not affect your license. However, this information is important and your participation is encouraged and truly appreciated. *Please complete the survey and return it with your renewal application in the envelope provided.* If you are both an LPN and an RN, complete and return only one survey.

If you renew your license via the Internet, you will have the opportunity to complete this survey online.

Go to www.michigancenterfornursing.org to view survey results and to sign up to receive Michigan Center for Nursing News & Updates electronically.

1. Are you a licensed practical nurse (LPN), a registered nurse (RN), or both? (Mark **one**. If you are both an LPN and an RN, complete and return only one survey.)

NOTE: This question was used only to identify respondents as RNs or LPNs and to determine the proportion of RNs who also hold a diploma/certificate as a LPN.

2. What is your education background? (Mark **all** that apply)

	Active only				
	2005	2006	2007	2008	2009
a) LPN diploma/certificate of nursing	78.7%	97.3%	97.1%	97.4%	96.3%
LPN certificate of achievement	22.7	—	—	—	—
b) RN diploma in nursing	0.7	0.7	0.9	0.8	0.8
c) Associate's degree in nursing	3.5	3.8	3.9	3.4	4.2
d) Bachelor's degree in nursing	1.0	1.0	0.9	1.1	1.1
e) Master's degree in nursing	0.1	0.0	0.1	0.1	0.1
f) Master's degree in other field	—	0.4	0.5	0.5	0.5

³ Frequencies reported may not equal 100 percent due to rounding.

⁴ All nurses are required to renew their license every two years after receiving their first license, which results in two approximately equal cohorts of nurses. Analysis of survey data shows a difference between these two cohorts of nurses in age distribution. Therefore, survey responses that may be affected by age—such as plans to continue practicing nursing—should be compared only to responses received from the same license renewal cohort two years ago (e.g., 2009 compared to 2007, 2008 compared to 2006).

	Active only				
	2005	2006	2007	2008	2009
g) Doctorate in nursing	0.0%	0.0%	0.0%	0.0%	0.0%
h) Doctorate in other field	—	—	—	0.1	0.1
i) Other degree	5.5	7.1	7.5	8.3	6.7

NOTE: On the 2004 survey, LPNs were not asked for their education background.

3. If you have a doctorate in nursing, please indicate the type of doctorate degree. (Mark all that apply.)

	2009 (Active only)
a) Doctor of Nursing (ND)	0.0%
b) Doctor of Nursing Practice (NPD)	0.0
c) Doctor of Nursing Science (DNSc)	0.0
d) Doctor of Philosophy (PhD)	0.0

4. Are you applying for or renewing specialty certification this year? If so, mark all that apply.

	2009 (Active only)
a) Clinical nurse specialist	0.3%
b) Nurse anesthetist	0.0
c) Nurse midwife	0.0
d) Nurse practitioner	0.2

5. Are you currently enrolled in a program to obtain a Bachelor of Science in Nursing (BSN) degree?

	2009 (Active only)
